PROFESSIONAL SUMMARY

Full-Stack Developer with 2+ years of experience building AI-integrated web platforms and real-time applications. Skilled in designing and delivering end-to-end solutions, including secure RESTful APIs with ASP.NET Core, scalable SQL Server databases, and responsive React frontends.

Passionate about integrating LLMs and AI agents into practical, production-ready systems. Demonstrated through projects such as LagbarShop, a live multi-platform e-commerce ecosystem featuring real-time GPS tracking and a conversational AI assistant, and AI Academic Mentor (AIAM), an AI-powered academic guidance platform leveraging Groq and Ollama models.

TECHNICAL SKILLS

- .NET Ecosystem: .NET, ASP.NET Core, ASP.NET Core Identity, JWT Authentication
- Programming Languages: C#, JavaScript (ES6+), Python, Data Structures & Algorithms
- Software Architecture: Object-Oriented Programming (OOP), Microservices Architecture, RESTful API Design
- Backend Development: ASP.NET Core Web APIs, Entity Framework Core (EF Core), LINQ
- Databases: SQL Server, SQLite, Supabase
- Caching & Performance: Redis Caching
- Frontend Development: React, HTML5, CSS3, Tailwind CSS
- Real-Time Systems: SignalR (Real-time communication & streaming)
- AI Integration: LLM integration (Groq, OpenAI), AI Agent orchestration
- DevOps & Tools: Docker, CI/CD
- Cloud & Backend Services: Supabase
- Payments & Integrations: Stripe API integration
- Testing: xUnit Unit Testing
- Version Control: Git, GitHub

PROFESSIONAL EXPERIENCE

Full-Stack Developer – AI & E-Commerce Systems (Personal Projects)

Self-Directed / Portfolio Work

Live Demo: <http://lagbar.runasp.net/>

- Developed a full-stack AI-powered e-commerce ecosystem using ASP.NET Core Web API, React, and SQL Server, serving Customers, Shop Owners, and Delivery Agents through dedicated web portals.
- Engineered real-time order management with SignalR WebSockets, enabling live GPS delivery tracking and instant order status synchronization across all platforms.
- Designed and implemented a multilingual AI shopping assistant powered by Groq LLM, supporting natural-language product search, personalized recommendations, cart management, and customer assistance.
- Integrated secure online payments with Stripe, implemented JWT-based authentication and role-based authorization, and automated PDF/Excel invoice and reporting generation.
- Built a scalable RESTful API architecture with role-based access control, inventory management, order processing, and notification services to support a production-ready e-commerce platform.

AI Full-Stack Developer – Academic Intelligence Platform (AIAM)

Self-Directed / Portfolio Work

- Developed a full-stack AI-powered academic mentoring platform using ASP.NET Core Web API (.NET 8) and Blazor, delivering an interactive and responsive web UI for students.
- Integrated both local and cloud-based LLMs (Ollama, Groq APIs) to provide intelligent career guidance, soft skills coaching, and personalized project recommendations.
- Built a document intelligence pipeline by implementing PDF transcript ingestion and parsing using PdfPig, enabling automated academic analysis.
- Designed and automated dynamic report generation using QuestPDF, producing structured mentoring reports and insights.
- Architected and managed a scalable relational database using Entity Framework Core (Code-First) with SQL Server.
- Implemented secure authentication and authorization using JWT, combined with BCrypt hashing for password protection and secure user management.

EDUCATION

Bachelor of Science (B.Sc.) in Software Engineering
Faculty of Engineering, Karabuk University
2022 - 2026

LANGUAGES

Arabic: Native
English: Professional
Turkish: Good
